

New Shower Surrounds:

After surveying our Residents, we established most Residents prefer a walk-in shower as opposed to a tub with a shower. It is easier to enter because the water retention wall is only about 6' inches above the floor, whereas a tub is about 18' inches above the floor.

Because we listened to the needs of our Residents, we have installed Brand New Shower Surrounds in vast majority of our Apartments. Those new Walk-In Surrounds are complete with scald resistant single handle faucet and shower head.

Please compare our Walk-In Showers top the competition and you will find we did completely new surrounds made with quality ceramic tile, instead of cheap fiberglass (which fades and crack over time and is easily scratched), and our showers surround is new.

And some shower surrounds have added Safety bars. We can add Safety Bars at the request of the Resident, if you would like one or more for your safety. (When doing the rebuilding, we added special re-enforcing material behind the new ceramic tile.)
